Alexandria, VA 22313-1450

Sir:

**RESPONSE TO NOTICE OF NON-COMPLIANT APPEAL BRIEF**

This paper is filed in response to the Notice of Non-Compliant Appeal Brief, mailed June 17, 2005.

**CERTIFICATE OF MAILING**

I hereby certify that this document, along with the documents referenced above, are being deposited with the United States Postal Service as First Class Mail, in an envelope addressed to: Mail Stop Appeal Brief - Patents, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450 on the date indicated below.

## **CLAIMS APPENDIX**

### **IN THE CLAIMS:**

1. (rejected) A sink comprising:  
a basin; and  
a faucet assembly comprising a discharge neck coupled to a faucet housing,  
the faucet housing movably supported on the basin and selectively rotatable between an  
upright position wherein at least a portion of the discharge neck protrudes out from the basin  
such that in operation the discharge neck discharges a stream of water receivable in the basin,  
and a folded position wherein the faucet assembly is received within the basin for storage.
2. (rejected) The sink of claim 1, wherein the faucet assembly includes a flow  
control valve.
3. (rejected) The sink of claim 1, wherein the basin has a top portion which  
defines a plane and wherein the faucet assembly is located completely below the plane when  
in the folded position.
4. (objected to) The sink of claim 1, wherein the faucet housing includes a pivot  
detent that is in contact engagement with an interior surface of the basin when the faucet  
assembly is in the upright position.
5. (rejected) The sink of claim 1, wherein the basin further comprises a retainer  
that releasably retains the faucet assembly in the folded position.
6. (canceled)
7. (canceled)
8. (canceled)
9. (rejected) A sink comprising:  
a basin;  
a faucet assembly attached to the basin, the faucet assembly including:

a discharge neck.,  
a handle for controlling liquid flow through the discharge neck, and  
a faucet housing supporting the discharge neck on the basin; and  
a mounting means for pivotally coupling the faucet housing to the basin such  
that the faucet assembly may be pivoted through an angle of approximately ninety  
degrees about a horizontal axis defined by the mounting means.

10. (rejected) The sink of claim 9, wherein the basin includes a drain.

11. (rejected) The sink of claim 9, wherein the basin includes a retainer for  
releasably retaining the faucet assembly in the folded position.

12. (rejected) The sink of claim 11, wherein the retainer comprises one or more  
detents on the faucet housing.

13. (rejected) The sink of claim 9, further comprising a flow control valve  
supported in the faucet housing.

14. (rejected) The sink of claim 13, wherein the flow control valve comprises a  
connector for receiving the discharge neck.

15. (objected to) The sink of claim 14, wherein the connector allows the  
discharge neck to rotate about a vertical axis.

16. (rejected) The sink of claim 9, further comprising a conduit for supplying  
liquid to the faucet housing.

17. (rejected) The sink of claim 9, wherein the faucet assembly may be pivoted  
between an upright position in which at least a portion of the discharge neck protrudes from  
the basin and a folded position in which the faucet assembly is below a plane defined by a top  
surface of the basin.

18. (objected to) The sink of claim 9, wherein the mounting means comprises a  
bushing received within an enclosure in the basin.

19. (objected to) The sink of claim 9, wherein the mounting means comprises a peg received within an enclosure in the basin.

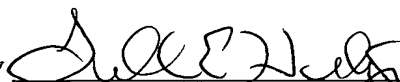

20. (objected to) The sink of claim 19, wherein the peg is retained within the enclosure by a spring.

With the arguments set forth in its Appeal Brief, dated April 8, 2005, Applicant respectfully requests reversal of the rejection and allowance of the pending claims.

Respectfully submitted,

Date: 23 June 05
